

SuperGrok Heavy / Cursor Grok Bot access incident

Regulator-ready public attachment | Prepared 2026-09-05 UTC | Status: unresolved

A paid SuperGrok Heavy subscriber reaches the X authorization step for Cursor's Grok Bot integration, but Cursor's callback returns `policy_denied` and the product displays Access blocked, please contact support. The customer reports that the X/xAI identity uses a valid .ru email address. Cursor has not disclosed the exact evaluated policy or provided a working matching-account route.

Purpose and scope

This attachment gives a consumer-protection or digital-services reviewer a compact, public-safe record. It does not allege that the email suffix is definitively the cause, that either vendor acted unlawfully, or that a complaint has already been filed. Account addresses, ticket identifiers, OAuth/session values, payment identifiers, cookies, tokens, IP data, and raw correspondence are excluded.

Confirmed facts

- xAI publicly lists Grok Bot as a benefit included with SuperGrok Heavy.
- Cursor's sign-in surface exposes a Get access with SuperGrok Heavy path.
- The X authorization consent step is reachable for the paid identity.
- The return to Cursor produces `policy_denied` and a visible access-blocked message.
- Fresh retries, no-VPN/no-proxy checks, and a Cursor-reported backend refresh did not restore access.
- Cursor stated that the SuperGrok and Cursor email addresses must match and warned that successful links are permanent.
- The customer corrected the original framing: a new matching-.ru personal Cursor account is acceptable; the existing non-.ru Cursor account is not required.
- xAI's automated support routed Grok Bot requests to Cursor; Cursor's automated assistant closed the transferred request as a duplicate of the unresolved original case.

Central unresolved issue

The customer is not asking for cross-email linking. The request is for a supported route that delivers the advertised paid benefit to the paid X/xAI identity, including creation or use of a matching personal Cursor account if required. The vendor must also avoid consuming a permanent entitlement link on an unintended account.

Dated route summary

Date	Route	Outcome
2026-08-16	Cursor support	Diagnostics accepted and forwarded; no named technical owner, finding, remedy, or ETA.
2026-08-19	Cursor retry	Settings refresh reported; live failure persisted.
2026-08-20	Cursor account rule	Matching-email requirement and permanent-link warning supplied.
2026-08-30	xAI support	Automated route said Cursor handles Grok Bot requests.
2026-09-03	Transferred Cursor route	Automated assistant closed it as a duplicate.
2026-09-03	Customer correction	New matching-.ru personal Cursor account explicitly accepted.
2026-09-04	Overdue follow-up	Named owner, exact rule, supported path, ETA, or billing remedy demanded.

Evidence and inference boundary

Record	Supports	Does not prove
xAI plan announcement	Grok Bot is publicly listed under SuperGrok Heavy.	Eligibility for every identity or region.
Redacted product screenshot	Visible access-blocked result beside the paid route.	Subscription ownership or server-side cause by itself.
Authorization screenshot	X login and Cursor consent route were reached.	Cursor's acceptance of the identity.
Support chronology	The disclosed routing, retry, and duplicate outcomes.	Internal ownership, policy logic, or investigation state.
Repeated failure	A persistent product-level denial after ordinary checks.	That .ru is definitively the evaluated trigger.

Requested resolution

- Assign a named human technical owner for the Grok Bot account and entitlement path.
- State the exact backend account, domain, region, risk, or eligibility rule evaluated by policy_denied.
- Confirm whether a new matching-.ru personal Cursor account is supported and provide safe steps that cannot consume a permanent link on the wrong account.
- Confirm whether any full or partial Grok Bot link already exists for the paid identity.
- Provide a firm remediation date and a live retry window.
- If the advertised benefit cannot be delivered, state that restriction clearly and provide a proportionate refund, service credit, or subscription remedy.

What counts as resolution

A backend assurance, case transfer, or duplicate closure is not enough. Resolution requires a successful supported signup/linking flow followed by live confirmation that Grok Bot is usable for the paid identity.
